**Over half of all households in Ireland now have a smart electricity meter which is bringing benefits to customers, the environment and the economy.**

**BETTER INFORMATION**

Smart meters will allow you to take more control of your electricity consumption and enable you to view your electricity usage through your ESB Networks Online Account.

**MORE ACCURATE BILLING**

Smart meters are read automatically. This enables more accurate billing and greatly reduces the need for estimated bills.

**CHOICE OF SMART SERVICES**

Electricity supply companies now offer new smart price plans which include Time-of-Use tariffs. If selected, you can move some of your consumption to times of the day when electricity is cheaper.

**BEGIN YOUR LOW CARBON JOURNEY**

The upgrade to smart meters also enables the interim microgeneration support scheme. This allows you to generate your own electricity (e.g: using solar panels) and receive payment for any excess electricity you sell into the grid.
