

Demand Capacity Workbook 2024

Version: 1.0
Date: 22/11/2024

Overview: *This workbook is **for indicative, informal purposes only**. All connections are subject to connection specific studies and the decision of ESB Networks' Planners. The workbook provides a high level, indicative capacity analysis from the MV busbars at HV substations to the 110 kV busbar. Capacity of 38 kV lines are not included in this iteration of the capacity workbook. The indicative capacity reported is for demand connections only. For indicative generation capacity, please consult the Generation Capacity workbook.*

Purpose of the "2. Capacity Search" tab:

This tab gives a projection of the demand capacity available at individual substations and the upstream limitations of Bulk Supply Points (BSPs).

Options are available in the interface for the user

- Select their desired substation by name, or use a Geographical Search function to locate their closest substation.
- Choose a voltage level, and the workbook will show the capacity available at that voltage level.
- Choose whether to display the firm or non-firm capacity.

Purpose of the "3. Master Capacity List" tab:

This tab provides a comprehensive list of projected demand capacity at all substations for the four load growth scenarios examined.

Load Growth Scenarios Studied:

Below are the load growth percentages used as part of the demand capacity forecast:

Load Growth Rates				
Location	Conservative	Best View	Base Case	Aggressive
Dublin North	3.6%	3.6%	4.2%	6.6%
Dublin Central	3.0%	3.6%	4.0%	4.9%
Dublin South	2.5%	3.0%	3.4%	4.9%
National Growth Rate (Outside Dublin)	2.2%	2.8%	3.2%	3.6%

Capacity Search Sheet - User Guidelines

Notes: *Please wait for the workbook to finish calculating before acknowledging results.
The user can check the progress by watching the bottom corner of the screen.
The workbook must be opened in MS®Excel 365 desktop application, not the browser.
This is because of the array formulas used to account for future network reinforcements.*

General Input Parameters:

Cell B4 Set to "-" to enable geographical search. Otherwise enter selected substation for capacity results.
Cell D4 Select desired connection voltage from those available in cell D3.
Cell E4 Select desired connection type, either Firm or Non-Firm.
Cell E11 Becomes active if more than one connection method of the same connection voltage is available at the substation.
Cell will turn yellow and selection will become available for user input.
Note that this should be returned to 1 for majority of substations.

Cell Colouring:

Cells in green indicate available capacity.
Cells in red indicate shortfall in capacity.
Cells in orange text use linear regression to forecast capacity where power flow results aren't available.
Three years of results required for projection.

Geographical Search Mode:

It is difficult for a customer to know where their closest HV substation is located simply based on the substation name. Therefore, a geographical search mode is provided. The user may enter the coordinates of their site. The workbook will then find the closest substation to the site and display the capacity.

Cell H12: Select desired geographical search mode - either Latitude/Longitude or Easting/Northing.
Cells H4 & I4: Enter Longitude and Latitude Coordinates for desired connection point.
Cells H8 & I8: Enter Easting and Northing Coordinates for desired connection point.
Cell I12: If the closest substation found has no capacity, the user may increment this figure to select the next furthest substation from the user's coordinates.

Substation Selector

Select Station here →	Select Substation	Substation Connection Voltages (10,38)	Firm/Non-Firm Connection
	-	10 kV	Firm
Search Result:	Nth Closest Substation	Transformer Primary voltage	Transformer Secondary voltage (Connection Voltage)
	MERRION SQUARE	38 kV	10 kV
	38 KV		Ringsend Blue
Result Inspector:	Connection Method Selected	Connection Method Selector (Max: 1)	
	Merrion Square-T42_10_MVA	1	

Geographical Substation Search

Leave "Select Substation" as dash for geographical search. Enter your site coordinates below to find the capacity at the nearest HV substation.

Enter Coordinates here →	Latitude	Longitude
	53.337340°	-6.248410°
or	Easting	Northing
Enter Irish Grid reference here →	316711	233306
	Coordinate System	Nth Closest
	Latitude/Longitude	1
